chipright

design and verification consultants
right from the start

Chipright is a strategic partner for micro-electronic consulting engineers.

We supply senior level consulting engineers that are experts within their field of competence to technology projects in the micro-electronics industry.

Engineers we supply?

We supply consultants that can take a project from top level architecture specification at the concept phase, right through to the final tape-out of a device.

We have skilled consultants in all areas of Digital Design, Verification, Mixed-Signal Verification & Analog design, focusing on projects within the ASIC, Analog Mixed-Signal, FinFET, 180nm-5nm,, RF-mmWave, FPGA, DFT, Test & deep silicon design processes.

We built a system over 16 years that has the capacity to supply the right skill at the right price in the right location at the right time. Chipright provide senior level engineers and teams that can work on-site or remotely.

Through our commitment to providing the best consultancy to our customers, it has enabled us to grow across International markets. We now service leading companies in markets including:

5G
Medical
Industrial
Automotive
Defense & Aerospace
Telecom
Machine Learning (ML) & Artificial Intelligence(AI)

Experience

Chipright has worked on both large and small projects for numerous customers.

Our engineers areas of expertise include:

ASIC Design & Verification
ASIC Digital Layout & Physical Design
Analog AMS Design & Verification
Analog Layout
DFT
Test Engineering
Post Silicon Validation
FPGA Design and Validation
Analog and RF Design & Test
Functional Safety

Care Programs
We developed care programs to bring success to our customers projects.

Customer Care program

Engineer Care program

Customer Care Program
Chipright care about our customer's projects and ensure the required communication channels are setup, monitored and controlled in delivering a project. Our customer care program contains a well-defined and structured process to facilitate periodic review of any aspects of the project being undertaken at a Customer's location.

Engineer Care Program
Chipright care about the goals and career aspirations of our engineers. We recognize that engineers work in a demanding environment, often challenged to solve problems that there are no existing solutions for. Our engineers work in an environment where project deadlines are critical to the success of the end clients micro-chip product. Those challenges require skill, attention to detail, motivation, energy and a willingness to work in a time efficient manner to deliver the project.

Chipright ensure the required communication channels are setup, monitored and controlled in delivering a project. Our engineering team care program contains a well-defined and structured process to facilitate periodic review of any aspects of the project being undertaken at our clients organization.

Why Choose Chipright?
Unequalled industry market knowledge
Specifically on the Semiconductor Industry
Established engineering network
Deliver Exceptional Engineers, measured on

♦ **Technical Skill Level**

♦ **Motivational Level**

♦ **Experience Level**

Proven Talent Pool
Proven ability to source & manage projects
We deliver projects right first time
